

## Shed Roof Kit Fixing Guide

Please note: This kit is designed for use with a 6ft x 4ft Apex shed roof, check that each side of the roof has a size of approx. 1.9m across and 0.75m up the roof.

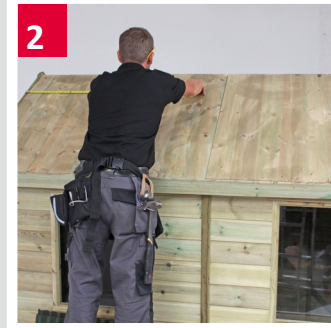

1

Open and check contents.

There should be:

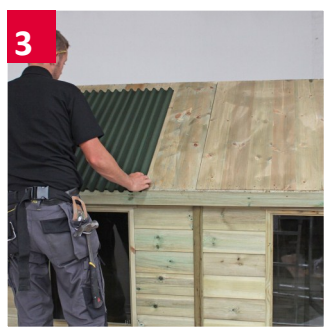

- 4 sheets 1010mm x 670mm
- 2 ridge pieces
- 1 Pack of 100 Nails

2

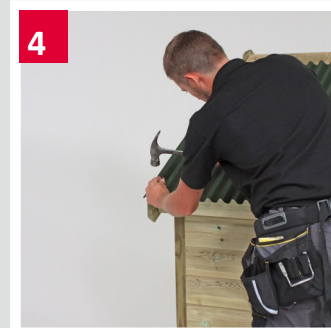

If you are replacing the roof, check that the existing felt is not unduly wrinkled, smooth out any bumps.

**Maximum possible useable dimensions are 1.9m x 0.75m**

3

Start by placing one of the sheets to the left hand side of the building, allowing no more than a 20mm overhang.

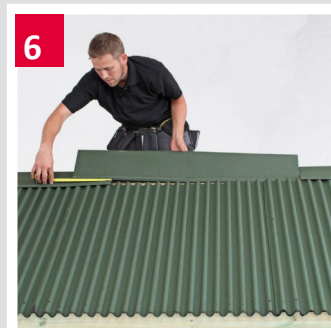

4

Nail through the top of the corrugation into the existing boarding using the nails provided.

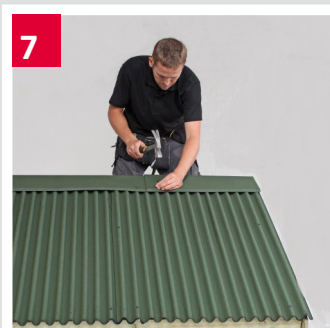

5

Place the next piece to the first with a two corrugation lap and fix as before.

6

Place the ridge pieces on the top of the roof and overlap to ensure they extend from one end to the other, if necessary covering any existing timber barge boards.

7

Nail along the ridge pieces through the corrugation tops to complete.
